

Solve the following system of linear equations by the following methods: Graphing, Substitution and Addition.

$$\text{System : } \begin{cases} 2x + 3y = 6 \\ 2x + y = -2 \end{cases}$$

Substitution Method:

Addition Method:

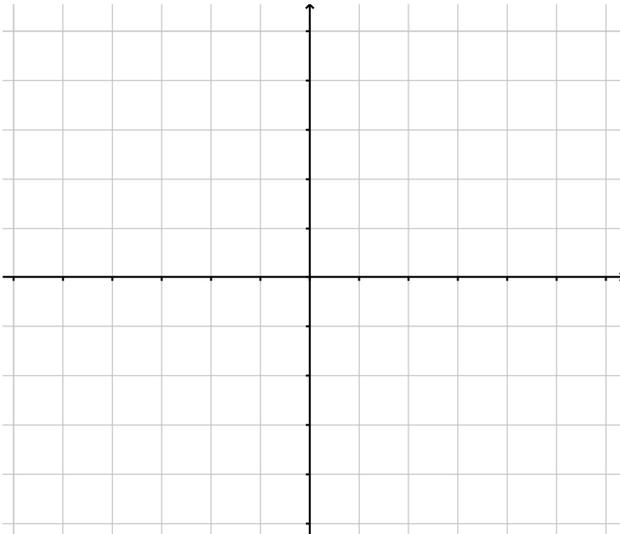

Type of System:

Number of Solutions:

Solution:

$$\text{System : } \begin{cases} 4x + 6y = 12 \\ 6x + 9y = -9 \end{cases}$$

Substitution Method:

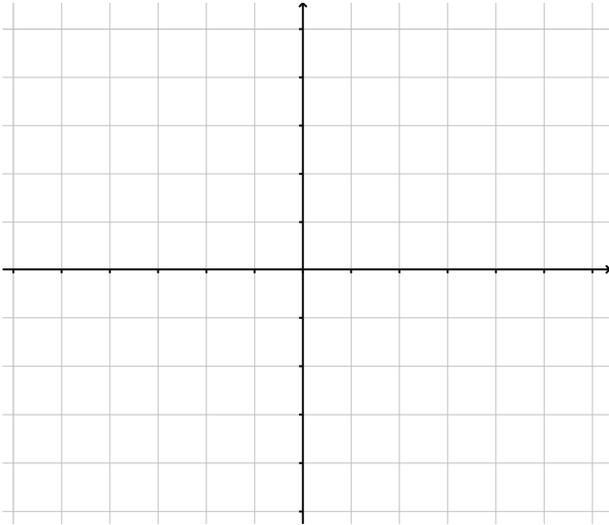

Addition Method:

Type of System:

Number of Solutions:

$$\text{System : } \begin{cases} 2x + 3y = 6 \\ 6x + 9y = 18 \end{cases}$$

Substitution Method:

Addition Method:

Type of System:

Number of Solutions:

Solution:
